

To the management of ASTEC Paints St Marys Branch, ADELAIDE.

In 2006 I made enquires at the Adelaide Home show with the ASTEC sales person. At this time I became interested in the thermal roof product which is promoted as being more durable and heat resistant due to ASTEC's infra red repelling technologies. After making several enquires with ASTEC, I later in 2006 had my concrete roof re sealed using the thermal roof paint product.

It is now March 2007 and I can now say that after a very hot summer, I am most impressed with this product.

The finished product is visually pleasing and the heat resistant qualities are quiet amazing.

Even though we chose black for our colour, which is the least heat resistant colour in the spectrum, the results have been significant.

Prior to the ASTEC application and when the weather has been extremely hot, we have had to put our air-conditioning on early afternoon. Since ASTEC we have not had to put the air-conditioning on until late afternoon and in some cases not at all.

I am extremely pleased with this product and would advise anyone who is considering re sealing their roof, or requiring paints for other purposes around their house or business, to make enquiries with ASTEC.

I would strongly recommend anyone considering re sealing their roof to seriously consider and look into this thermal roof paint product.

Now having used the ASTEC brand I will be looking to use your products for all my painting needs.

You will not be disappointed with the results or the comparative costs to other well known quality products.

Thank you ASTEC.

Kind regards,

G. CAMPBELL

ADELAIDE.
