

(TECHNICAL BULLETIN)

URE-TECH FORMULATED WITH A NON-SLIP FINISH

ASTECC IS COMMITTED TO ONGOING RESEARCH AND DEVELOPMENT

Ure-tech R

NON-SKID

This product has all of the normal performance of Ure-tec accept it is a non-skid finish. Although the finish looks like a low sheen finish because of the non-skid aggregate it is actually a full gloss product that will provide good dirt pick-up resistance, chemical resistance and washing properties on flooring applications.

The product is supplied ready for use and should not be thinned. The product must be applied with a foam roller in the same manner that a roll on texture would be applied. For example; parallel strips, then cross hatched then tipped off in the same direction.

Unlike conventional non-skid finishes that use silica sand as the non-skid component. The non-skid aggregate used is a synthetic particle that does not pack up like sand and allows the applicator to achieve a extremely uniform finish during application along with many other **benefits including:**

- It will not absorb water and air born dirt.
- Unlike silica, Ure-tech R Non-skid does not leave white scuff marks from foot traffic
- It's particle shape allows very uniform application and simplicity for the applicator.
- It is extremely abrasion resistant, more than silica.

The product can be used on most construction surfaces and some of the principal areas include:

- Industrial flooring.
- Hotel walk ways entrances and stairs that are exposed to water requiring non skid surface for safety.

Astec Paints are a 100% Australian owned company committed to the research and development of technologically advanced coatings that provide premium durability against our harsh Australian conditions. Our coatings are manufactured with high regard for worker safety and environmental care and will provide you with absolute confidence in long term performance.
